WT Assignment-2

N.V.S.K. Kalyani

174N1A0584

3rd B.Tech CSE - C

1. What is the role of action attribute in form tag?

Ans Action attribute is used to specify where the form data is to be sent to the server after submission of the form. It can be used in the `<form>` element.
Syn: `<form action = "url.html">`

2. Why post method is more secure than get method?

Ans POST is more secure than GET because

1. GET parameters are passed via URL, it means the parameters are stored in server logs and browser history. It makes very easy to because the data.
2. POST method is more secure because the data is not sent in URL like GET method.

3. What is HTTP request format?

Ans HTTP is the underlying format that is used to structure request and responses for effective communication b/w a client and a server. The message that is sent by a client to a server is known as HTTP request.

1. Request line

2. Headers

Eg:- `https://www.google.com`

4. what are the advantages using GET method?

- Ans
1. It makes easier to setup for small, non secured.
 2. No need to attach the variable to the headers
 3. It is possible to book marks the page with specific query starting values.

5. write a php program to access form information?

```
<html>
```

```
<body>
```

```
<form action="welcome.php" method="post">
```

```
  name: <input type="text" name="name"/> <br>
```

```
  E-mail: <input type="text" name="email"/> <br>
```

```
  <input type="submit" value="submit"/>
```

```
</form>
```

```
</body>
```

```
</html>
```

welcome.php code:-

```
<html>
```

```
<body>
```

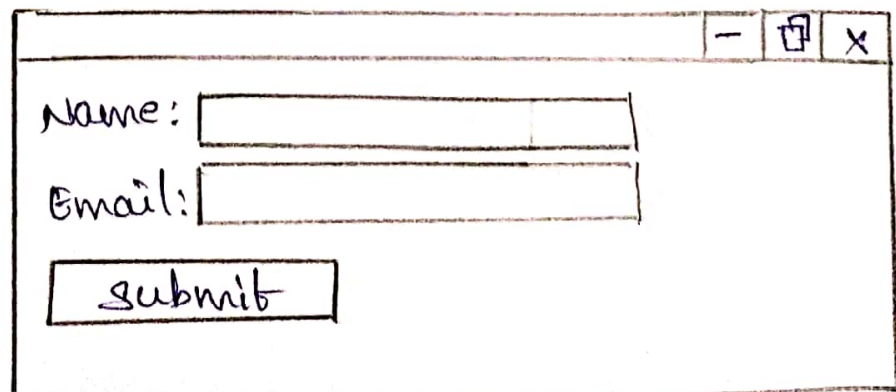

```
  welcome <?php echo $_POST["name"]; ?> <br>
```

```
  your email address is: <?php echo $_POST["email"]; ?>
```

```
</body>
```

```
</html>
```

output:-

Name:

Email:
